The Leader in Systemic Enzyme Therapy

AST Enzymes offers healthcare professionals and consumers a natural, safe and highly effective therapeutic alternative for preventative care and health.

AST Enzymes is a true enzyme manufacturer: one that formulates and creates enzyme supplements, not simply encapsulates and bottles them. This allows us to control every aspect of the enzymes we create and ensure that the utmost quality and potency of our enzymes are far superior to the competition. Being an actual Enzyme manufacture also allows us to perform quality control test on the enzymes to guarantee the quality is second to none.

We differ from the competition because they are simply marketing companies, they do not actually make the enzymes. These companies purchase Enzymes from actual manufactures, such as AST, and then proceed to market the products. We have more than 50 years of enzyme experience and have created countless variations of formulas. We have the advantage of the longevity of knowledge to know the facts, simply stated, we know what works and what does not. Our Master Formulator, who created many of the original systemic enzyme formulas on the market today, has taken and applied all of the information we have assembled over the past half of a century and developed the utter most paramount Enzymes on the market today.
